

# OEM Integration Made Simple

## Acura and Autosoft DMS

Acura

Autosoft's DMS is approved for integration with Acura and American Honda Motor (AHM) Company's iN Plus Realtime communications system. **Improve operational efficiencies with significant time savings and error reductions.**

### F&I/Sales Integrations

»» **Retail Delivery Reporting (RDR):** Throughout the deal process, automatically transmit real-time retail delivery reporting (RDR) data to iN for use in various applications. The messages are triggered automatically when you complete standard steps in the deal process, such as marking a deal as finished, posting a deal in Accounting, and unwinding a deal.

### Accounting Integrations

»» **Vehicle Invoice:** Acura sends your manufacturer invoices to your DMS, which processes the invoices and makes them available on the Vehicle Purchases screen. On this screen you can select the invoice and pull its information to the posting screen, simplifying and speeding up the process.

»» **Financial Statements:** Prepare and print the Acura Financial Statement by pulling data from your DMS general ledger.

### Parts Integrations

»» **Parts Catalog:** The Web Parts Catalog on iN communicates with your DMS Dealer's Parts Inventory. Check the availability of parts in your DMS Master Inventory and transfer shopping lists to your DMS to view the lists on the Parts Queries screen. From there, apply the shopping list to a counter slip, service repair order, order queue, customer quote, or purchase order to limit rekeying.

»» **Parts Orders and Acknowledgements:** Create parts orders in your DMS and submit them to the iN Website for further review and submission to AHM. You can also view acknowledgments for submitted orders.

»» **Parts Returns:** Easily adjust stock levels by generating parts returns in your DMS and submitting them to AHM through the iN Website.

### Service Integrations

»» **Repair Orders:** Transmit repair order data to iN for use in iN applications, service marketing programs, and product defect analysis. Once you close the repair order, the system automatically sends the closed repair order to AHM. Warranty repairs will then be available for review within the iN system.

»» **Vehicle Service History:** While creating a repair order in your DMS, review the vehicle's service history information from AHM. This interface also gives service advisors access to vehicle campaign information, warranty coverage and cancellation/ extension information, and VSC and CUC coverage, all within your DMS. Easily pull open service campaigns to an RO without rekeying data.

“ This integration between Acura and its dealers is part of our continued commitment to bring innovative technologies to market that help our customers work more effectively. ”

– Bryce Veon, President & CEO, Autosoft
