

OEM Integration Made Simple

Hyundai Motor Company and Autosoft DMS

Hyundai Motor Company has approved Autosoft's DMS for integration with its dealer communications system. **Improve operational efficiencies with significant time savings and error reductions.**

F&I/Sales Integrations

» **Retail Delivery Reporting (RDR):** Submit vehicle sale information to Hyundai.

Accounting Integrations

» **Financial Statements:** Pull data from your general ledger in your DMS to prepare and print the standard Hyundai Financial Statement.

Parts Integrations

» **Parts Interface:** Generate parts orders and returns in your DMS and submit them to the HMA DCS website.

» **Hyundai SmartStock:** Autosoft DMS works with Hyundai's supply modeling and retail tracking inventory management program to enhance inventory efficiencies and same-day service repairs. SmartStock will use parts information from your DMS to forecast demand for particular parts.

Service Integrations

» **Warranties:** Generate Hyundai-specific warranty repair orders in your DMS. Once you generate and close Hyundai warranty claims, you can enter additional warranty information in the Hyundai Warranty Entry menu, review it, print it, and transfer it to Hyundai. You can also view a list of repair orders sent to Hyundai and reactivate a repair claim.

“ This integration between Hyundai and its dealers is part of our continued commitment to bring innovative technologies to market that help our customers work more effectively. ”

– Bryce Veon, President & CEO, Autosoft
