

# OEM Integration Made Simple

## Toyota and Autosoft

Comprehensive integration leads to the maximum performance. Autosoft is certified by Toyota to integrate seamlessly with its Dealer Daily communications system. Exchange data quickly and securely *while increasing visibility, efficiency, and compliance across your business.*

### Sales

**RDR and Credit Contract Updates** | Retail Delivery Reporting (RDR) information is automatically sent to TMS. Credit contract details are generated and sent to TMS when you sell GAP, credit life, A&H, and EWU (Wear Care, Smart Lease Protection or Environmental Protection) on any deal.

**Vehicle Updates** | TMS sends vehicle inventory adjustments to your dealership via Autosoft daily for both new and used inventory. Autosoft also sends updates to TMS as you make changes to vehicle records for both new and Toyota-certified used inventory.

**eContracting** | Submit eContracts directly to RouteOne directly from Autosoft for deal processing.

### Accounting

**Warranty Payments** | Autosoft automatically pulls Toyota warranty payment data every Monday morning into the Factory Payments screen from which warranty payment data can be applied to the factory receivables statement. The integration simplifies payment posting, eliminating the need for manual entry.

**Financial Statements** | Generate a monthly financial statement in Autosoft and transmit it directly to TMS.

### Parts

**Parts Inventory** | Autosoft sends daily and monthly parts inventory updates to TMS. The monthly update includes your dealership's entire parts inventory.

**Parts Master** | Autosoft pulls daily Parts Master updates to ensure you have accurate parts data.

**Parts Management** | Automatically submit parts orders and parts returns generated in Autosoft directly to TMS, facilitating parts returns and eliminating rekeying.

### Service

**Repair Orders** | Receive notification of special service campaigns while scheduling appointments or creating ROs. Open service campaigns can then be pulled to the RO, and Autosoft will write the repair. The RO is transmitted to TMS when closed.

**Labor Operation Guide** | Autosoft downloads labor operations data daily. The labor operation database ensures the appropriate labor operation codes are attached to warranty claims as they're closed. The system automatically sends the RO to your dealership upon closure.

"We engineered iron-clad integration between Autosoft and Toyota dealer systems so no transaction will ever fall through the cracks — proof that we are committed to our dealers' success."

Bryce Veon, President & CEO, Autosoft

# OEM Integration Guide for Toyota Dealers

Autosoft's Toyota certification supports all your dealership's day-to-day operations. The chart below outlines all Toyota integrations supported by Autosoft.
